

POOL DEMO

1. Obtain a demolition permit from the Building Division. The fee is based on the valuation of demolition and fill.
2. Break out and remove a three foot square section of the bottom at each end of the pool.
3. Remove the coping and the bond beam around the perimeter of the pool to 12” below grade.
4. Provide a soil compaction report from a certified engineer, certifying a compaction of 90/95% at the time of final inspection.
5. Remove and cap electrical to main service.
6. Remove and cap gas line to main service.
7. Remove and cap water line to main service.
8. Re-establish proper drainage: 2% from Building 1% to an approved disposal area.
